SUMMARY

Self-taught Full Stack & Automation Engineer with hands-on production experience building and maintaining real systems for a live business. Deployed and managed VPS infrastructure, built 8+ n8n automation workflows including AI chatbots and content pipelines, and self-hosted open-source ERP from scratch. Comfortable working across the full stack — from Nginx reverse proxy configuration to MERN application deployment to multi-language SEO automation. Started tech journey in March 2025 with zero background; learned by building, breaking, and fixing real systems.

EXPERIENCE

Full Stack Developer & Automation Engineer

Nov 2025 – Present

GKWebTech (Gajkesri Webtech Pvt. Ltd.) · Alwar, India

- Sole technical owner of all infrastructure — managed VPS, Dokploy, Nginx reverse proxy, SSL, DNS, and container deployments for 3 live production websites.
- Recovered full production environment after a critical Dokploy data corruption incident — manually retrieved n8n workflow JSON from container filesystem, redeployed all services, and restored zero data loss within 72 hours.
- Built 8+ automation workflows on n8n including: AI chatbots for two company websites, LinkedIn post scheduler triggered via Telegram, YouTube video generation pipeline using Gemini AI, and a multilingual SEO blog pipeline (English/Dutch/German) with Cloudinary image upload, Google Sheets approval gate, and auto-publish to MongoDB-backed website.
- Built and deployed agency and institute websites in MERN stack using Trae IDE, deployed on Hostinger via Dokploy with CI/CD pipeline.
- Self-hosted and configured Odoo ERP from scratch on VPS for clinic inventory management — debugged ERPNext version conflicts, pivoted to Odoo, achieved full deployment and staff adoption within one week.
- Built a dynamic client proposal system — converted a static Canva process into a deployable frontend with PDF export, enabling fast client-specific customization and version control via GitHub.
- Built multilingual agency website with full GDPR-compliant cookie consent system, hreflang SEO tags, and language switching (English/Dutch/German) — targeting Netherlands and Germany markets.
- Built n8n lead generation automation for Netherlands market — scrapes company websites, generates personalized outreach reports, and sends automated cold emails at scale.
- Integrated n8n automation workflow for a WordPress site (ayurvedastro) — automated LinkedIn posting pipeline with AI-generated content triggered via Telegram.
- Mentored a junior developer remotely on n8n workflow architecture, Cloudinary integration, and automation best practices — conducting technical knowledge transfer sessions across timezones.

SKILLS

Infrastructure & DevOps: VPS Management, Nginx (Reverse Proxy, SSL Termination), Docker, Dokploy, DNS Configuration, Linux CLI, GitHub Actions (CI/CD), AWS EC2, GCP, Terraform (basic)

Backend & Full Stack: Node.js, Express.js, REST APIs, MongoDB, PostgreSQL, Python, Django, JWT Auth, MERN Stack

Automation & AI Tools: n8n (advanced workflows), Gemini AI, Google Sheets API, Cloudinary, Telegram Bot API, AI-assisted development (Trae, Cursor, ChatGPT, Gemini)

Tools & Platforms: Git, GitHub, Odoo ERP, WordPress, Hostinger, UptimeRobot, Grafana (basic)

PROJECTS

Multilingual SEO Blog Automation Pipeline

- End-to-end n8n workflow: picks keywords from Google Sheets → generates SEO-optimized blog (title, slug, meta) → translates to Dutch & German → generates image → uploads to Cloudinary → waits for approval → publishes to MongoDB → live on website instantly.

Production Infrastructure Recovery

- Diagnosed and recovered from complete Dokploy data loss — identified corrupted deployment layer, extracted n8n workflow JSON manually from container storage, redeployed full stack (websites + n8n + ERP) with zero workflow data lost.

Dynamic Client Proposal System

- Replaced static Canva proposal process with a deployed frontend web app — slide-based layout, PDF export, hosted on VPS. Version-controlled via GitHub, enabling rapid client-specific updates.

Odoo ERP Self-Hosted Deployment

- Evaluated and rejected ERPNext due to version conflicts, deployed Odoo on VPS, configured inventory/CRM/attendance modules for clinic staff, achieved full team adoption within one week.

EDUCATION

Master of Commerce (Business Administration)

Raj Rishi Bhartrihari Matsya University, Alwar, India

Aug 2021 – Sep 2023

SELF-LEARNING JOURNEY

Began tech journey in March 2025 with no CS background. Learned frontend, backend, cloud deployments, and DevOps through self-study (freeCodeCamp, YouTube, documentation) and real project building — 40+ frontend projects, personal apps deployed on AWS EC2 and GCP, CI/CD pipelines with GitHub Actions and Terraform. Joined current role 8 months into the journey.
